

SMART Goal - David Gharibashvili

For the SMART framework, a student should set one goal that meets five clear criteria. The goal should be:

- **Specific** – Be clear about exactly what the goal is and what will be done to achieve it. Consider giving details about what, when, where, why, and how.
- **Measurable** – Make sure you have a way to assess whether you have achieved your goal.
- **Attainable** – State how you believe reaching the goal is within your power.
- **Relevant** – State how the goal will help you to meet your overall goals as a student.
- **Time-Based** – You need to set a time by which you will complete your goal to keep yourself accountable.

SMART Goals Template

ONE=SENTENCE GOAL: Find an entry-level (junior) Frontend Developer's job in a Georgian or international company in the calendar year 2025.	
How my Goal is Specific	The goal is clearly articulated and gives enough details as to when and where it is to be achieved.
How my Goal is Measurable	The goal will be achieved once I am hired as a web developer. So it is perfectly measurable.
How my Goal is Attainable	By fall 2025 I will have completed the Frontend Development - REACT class at SkillWill, so I will have all the knowledge and skills required for the stated job.
How my Goal is Relevant	It is very much relevant to the subject of my study at SkillWill.
How my Goal is Time-Bound	The goal has a clearly stated timeframe - calendar year 2025.
